Frontend UX Specification (FUXS)

Version 1.0

1. Design Vision

Create a calm, intuitive AI experience inspired by Apple's Human Interface Guidelines, emphasizing clarity, content-first layouts, accessibility, and elegant interactions.

2. Core Principles

Clarity, content-first design, progressive disclosure, immediate feedback, familiar navigation, and accessibility-first development.

3. Brand Identity

Deep Azure primary color, Emerald success accent, restrained warm neutrals, minimal color usage, and content-focused interfaces.

4. Typography

Inter as the primary typeface with a clear hierarchy: Display, H1-H3, Body, and Caption.

5. Layout System

8-point spacing grid, generous whitespace, centered reading width, rounded cards, and consistent elevation.

6. Motion

Subtle 150–250 ms transitions, meaningful animations, streaming AI responses, workflow progress, and reduced-motion support.

7. Navigation

Desktop layout with left navigation, center content, right context panel; mobile layout with bottom navigation and contextual sheets.

8. Information Architecture

AI Assistant, Workflows, Documents, Saved Items, History, Profile, and Settings.

9. AI Experience

Structured answers with direct response, details, requirements, steps, warnings, citations, and suggested follow-up questions.

10. Trust & Citations

Verification badges, official organizations, document titles, review dates, expandable citations, and visible confidence indicators.

11. Workflow Experience

Visual workflow progress, smart checklists, required documents, timelines, and estimated completion indicators.

12. Search

Semantic search with instant suggestions, filters, recent searches, and related recommendations.

13. Responsive Design

Mobile-first layouts optimized for one-handed use while maintaining consistent desktop experiences.

14. Loading & Error States

Skeleton loaders, streaming responses, informative empty states, and user-friendly error messaging.

15. Component Library

Buttons, cards, chat bubbles, citations, workflow cards, timelines, badges, modals, toasts, progress indicators, skeletons, and reusable design tokens.

16. Personalization

Adaptive language, workflow continuation, saved documents, and conversation history while preserving predictable navigation.

17. Accessibility

WCAG 2.2 AA compliance, keyboard navigation, semantic HTML, screen-reader support, reduced motion, and high-contrast compatibility.

18. Design Tokens

Centralized tokens for colors, typography, spacing, radii, shadows, borders, motion, and responsive breakpoints.

19. Definition of Done

All pages, user flows, responsive layouts, components, accessibility rules, and interaction behaviors are documented sufficiently for implementation.

20. Future Design System

Expand into a complete design system with reusable UI components, iconography, motion language, light/dark themes, and AI-specific interaction patterns.
