

# Uzbekistan OS

## Product Requirements Document (PRD)

### Version 1.0

## 1. Vision

### Mission

Create the definitive AI operating system for Uzbekistan that enables tourists, residents, expatriates, businesses, investors, and citizens to access accurate, personalized, and actionable information through conversational AI backed by official sources.

### Long-Term Vision

Build the reusable Atlas platform capable of powering country-specific AI operating systems (Uzbekistan OS, Kazakhstan OS, UAE OS, etc.).

## 2. Problem Statement

Information about Uzbekistan is fragmented across government portals, ministry websites, embassies, PDFs, forums, Telegram groups, and consultants. Users struggle to find accurate, current, personalized guidance.

## 3. Solution

An AI-powered knowledge platform combining structured government data, RAG, conversational AI, guided workflows, and official citations to help users complete real-world tasks.

## 4. MVP Goals

Demonstrate that AI can guide users through official Uzbekistan procedures more effectively than traditional web search while providing accurate, transparent, and personalized answers.

## 5. Target Users

International tourists, expatriates, entrepreneurs, investors, and Uzbek citizens.

## 6. MVP Scope

Five domains: Immigration, Tourism, Business Registration, Healthcare, and Everyday Living.

## 7. Core Features

1. AI Chat
2. Guided Workflows
3. Personalized Profiles
4. Smart Checklists
5. Official Source Citations
6. Related Question Suggestions

## 8. User Stories

Tourists plan trips, entrepreneurs register businesses, expats relocate, and citizens access government procedures using conversational AI.

## 9. Functional Requirements

Guest access with optional accounts, multilingual chat (English, Uzbek, Russian), conversational memory, natural language search, streaming responses, answer feedback, and official citations.

## 10. Non-Functional Requirements

Responsive design, secure architecture, first token under 3 seconds, average response under 8 seconds, scalable infrastructure, and high availability.

## **11. Out of Scope**

Voice, OCR, appointment booking, government API integrations, document storage, autonomous agents, payments, mobile apps, and reminders.

## **12. Success Metrics**

200+ structured documents, 95%+ cited answers in benchmarks, high user satisfaction, fast responses, and successful completion of common workflows.

## **Next Phase**

Produce a Technical Design Document (TDD) covering repository structure, architecture, database schema, RAG pipeline, API design, crawler, AI orchestration, deployment, and security.
